EDUCATION

ETH Zurich, Computer Science MSc — **Sep 2025 – present**

Major: Visual and Interactive Computing (Current grade: 5.4/6)

ETH Zurich, Computer Science BSc — **Sep 2021 – Feb 2025**

Christian-Ernst-Gymnasium Erlangen, A-levels (Abitur) — **2016 – 2020**

Graduated with distinction in physics (Deutsche Physikalische Gesellschaft award) and mathematics

WORK EXPERIENCE

AI Research Intern, INEEJI, South Korea — **Jun 2026 – present**

- Deployed a demand forecasting system for ~300 SKUs in food manufacturing (time-series foundation model + tree-based model), cutting WAPE by 44% vs. baseline, and analyzed the foundation model's behavior to make its predictions explainable
- Built NOx forecasting and control for an industrial glass furnace, grounded in process physics and causal structure, reducing prediction RMSE for the oxygen-ratio response from 6.8 to 4.5 ppm
- Designed an end-to-end pipeline (change-point detection, causal discovery, prediction, simulation) now used across the team for explainable, domain-informed modeling

Research Intern, Laboratory of Toxicology, ETH Zurich — **Feb 2025 – Jul 2025**

- Investigated genome-wide guanine oxidation patterns and their correlation with gene expression in mouse hippocampal tissue, combining statistical testing, tree-based models and multi-omics factor analysis (MOFA), supervised by Dr. Takhaveev and Prof. Stelling
- Built cluster-scale pipelines for genomic data (up to 106M features, 20 samples), now adopted by the lab

Teaching Assistant, ETH Zurich — **Autumn 2024, Autumn 2025**

Led weekly exercise sessions in Linear Algebra. Wrote custom summaries, graded assignments and exams.

Instructor, GirlsCodeToo, SPH Zurich — **Sep 2024 – Feb 2025**

Designed and taught programming and CS workshops for primary and secondary schools in Switzerland.

PROJECTS

Bachelor's Thesis, LRE Lab, ETH AI Center — **Sep 2024 – Feb 2025**

Automated Evaluation of Tutor Responses Using Large Language Models – An Analysis of Pedagogical Effectiveness
(Grade: 6/6), supervised by Prof. Mrinmaya Sachan

- Designed an LLM-based framework to classify pedagogical quality, comparing prompting strategies and fine-tuning approaches across multiple models (LLaMA, GPT)
- Created and open-sourced an annotated dataset of tutoring dialogues

AI + Environment Hackathon (4 weeks) — **Apr – May 2024**

- Built a canopy delineation and species classification pipeline for Amazon rainforest LiDAR data
- Selected for deployment in GainForest's XPRIZE Finals, contributing to their $250,000 bonus prize

SKILLS

Languages: Korean (native), German (C2), English (C1), Italian (B2), Japanese (A1)
ML & Data: Python, SQL (PostgreSQL), PyTorch, scikit-learn, Hugging Face, pandas, PySpark, R
Software: C++, Java, C#, TypeScript, React, Docker, Git, Linux
